

MAT 521, Fall 2006, Final Exam

Name: _____

This is a closed book, closed notes exam. No calculators are allowed. You must show appropriate work to receive credit, and **simplify** your answers except in the case of "counting" problems. Keep your answers exact!

1. (a) A developer of a new subdivision offers a prospective home buyer a choice of: 4 floor plans, 3 different heating systems, a garage or carport, and a patio or screened porch. How many different plans are available to this buyer?

(b) In how many ways can 4 boys and 5 girls sit in a row of 9 seats if the boys and girls must alternate? *Keep in mind these are 9 different individuals.*

(c) An elevator in a building starts with six passengers and stops at eight (different) floors. If every passenger is equally likely to get off at each floor, and all the passengers leave independently of one another, what is the probability that no two passengers will get off at the same floor.

2. A box contains eight blue cards and four white cards.

(a) If two cards are drawn one at a time, **with replacement**, what is the probability that both cards are blue.

(b) If two cards are drawn one at a time, **without replacement**, what is the probability that both cards are blue.

(c) If **four** cards are selected at random, without replacement, what is the probability that two of the cards will be blue and two will be white.

3. The strength of the signal from an electrical device can be considered to be a random variable X with pdf $f(x)$,

$$f(x) = \begin{cases} 4x^3 & \text{if } 0 < x < 1 \\ 0 & \text{otherwise.} \end{cases}$$

- (a) Find $Pr(X > 1/2)$.

- (b) Find the distribution function $F(x)$ of X . *Be sure to specify the values of $F(x)$ for all numbers x .*

Problem continued on next page.

(c) Find the probability density function $h(z)$ of $Z = 2\sqrt{X}$. Be sure to specify the values of $h(z)$ for all numbers z .

(d) A second, independent device has signal strength Y with the same distribution as X . Find $P(Y < X/2)$.

4. The following facts are known about the random variables X and Y : $E(X) = 3$, $E(Y) = 1$, $Var(X) = 4$, $Var(Y) = 9$.

(a) Find $E(X^2)$.

(b) Find $E(2X - 3Y)$.

(c) Assuming X and Y are independent, find $Var(2X - 3Y)$.

(d) Now assume that X and Y are **NOT** independent, and that $E(XY) = 5$. Find $Cov(X, Y)$ and $Var(X + Y)$.

5. The weights (in pounds) of certain industrial batteries are normally distributed with mean 8 and variance 4.

(a) Find the probability that a randomly selected battery will weigh less than 10 pounds.

(b) Batteries are shipped in containers that have a maximum capacity of 860 pounds. The battery company wants to ship 100 batteries in a container. What is the probability that such a shipment will exceed the container's capacity?

6. About 10% of the items produced by a certain machine are defective. A random sample of 900 items is collected and inspected. Let X denote the number of defective items in the sample.

(a) Find the mean and the variance of the number of defective items in the sample.

(b) Write an explicit expression for the probability that there are 108 or more defective items in the sample, **but do not evaluate it**.

(c) Find a good approximation to the probability above.

Bonus Problem Evaluate the indefinite integral

$$\int 6x \ln(2x) dx$$

Tables

Table of the Standard Normal Distribution Function

$$\Phi(x) = \int_{-\infty}^x \frac{1}{(\sqrt{2\pi})^{1/2}} \exp\left(-\frac{1}{2}u^2\right) du$$
