

2. Let X and Y be random variables with joint p.d.f.

$$f(x, y) = \begin{cases} 6xy^2, & 0 < x < 1, 0 < y < 1 \\ 0, & \text{otherwise} \end{cases}$$

(a) Find the *marginal p.d.f. of X* , $f_1(x) =$

(b) Compute the *conditional p.d.f. of Y given that $X=x$* , $g_2(y|x) =$

(c) Compute $\Pr(Y < \frac{1}{2} | X = .13) =$

(d) Are X and Y independent?

Include a description of the domain for any formulas in your answers.

3. Let X and Y be *independent* random variables with $E(X) = 1$, $E(Y) = 1$ and $E(X^2) = 2$, $E(Y^2) = 3$.

(a) Compute

$$E((X - Y)^2) =$$

(b) Compute

$$\text{Var}(X - Y) =$$

4. (a) A fair coin (probability of obtaining a Head is $1/2$) is tossed 40 times.

What is the expected number of Heads obtained?

What is the variance of the number of Heads?

(b) A biased coin with probability of obtaining a Head equal to $1/5$ is tossed 50 times.

What is the expected number of Heads obtained?

What is the variance of the number of Heads?

(c) Suppose the two coins are tossed independently of one another.

What is the total expected number of Heads obtained?

What is the variance of the total number of Heads?

5. Let X_1, \dots, X_n form a random sample of size n from a distribution for which the mean is $\mu = 100$ and the variance is $\sigma^2 = 12$. Use the Chebyshev inequality to estimate how large n must be in order to insure that

$$Pr(98 \leq \bar{X}_n \leq 102) \geq .9$$

6. Let X be the lifetime in hours of a certain type of light bulb. Suppose X is normally distributed with mean of 850 hours a standard deviation of 100 hours. What is the probability that a given light bulb will last at least 720 hours? (All of April!)

Table of the Standard Normal Distribution Function

$$\Phi(x) = \int_{-\infty}^x \frac{1}{(2\pi)^{1/2}} \exp\left(-\frac{1}{2}u^2\right) du$$

x	Φ(x)	x	Φ(x)	x	Φ(x)	x	Φ(x)	x	Φ(x)
